**ADDITIONAL INFORMATION SUPPORTING NJD** (e.g., paragraph 1 site conditions; paragraphs 2-3 rationale used to determine NJD, including information reviewed to assess potential navigation or interstate commerce connections; and paragraph 4 site information on waters of the U.S. occurring onsite):

A single depressional wetland was found on the site. American elm, green ash, cattail, fox sedge, redtop grass, and marsh milkweed dominate this wetland.

The wetland lies entirely within the SE ¼ of Section 23, T. 5N., R. 22E., Milwaukee County, Wisconsin. As such, the wetland boundaries lie entirely within the State of Wisconsin. In addition, the wetland does not display any connection to, nor is it considered adjacent to, any "waters of the U.S." The wetland appears to drain into a ditch along the west boundary of the property. However, this ditch does not connect to any waters of the United States. For these reasons, the wetland is considered an intrastate, isolated wetland.

The wetland is not, nor is it likely to be, used by interstate or foreign travelers for recreation, industry, or commerce. The wetland lies on private property, with no public access. Lastly, the wetland does not contain fish or shellfish which could be taken and sold. For these reasons, no interstate commerce nexus to this wetland has been established.

No other waters were found on the site.
